Certified Data Center Professional(CDP) exam is given by the CDP Global, Inc. and is meant for professionals who are part of the information technology (IT) field and are in demand for certifications that specialize in networking and computer hardware. The exam evaluates the knowledge of the candidates on the implementation of data centers, server storage and networking. To pass this exam, you need to score well in the test in the order to qualify for the certificate. The result of the test indicates how much you are proficient in your knowledge and skills, which is good for you to apply to a job that requires a high level of expertise. Exam Preparation I wanted to become a certified data center professional because I wanted to offer my clients the expertise that they require. As a business owner, I find myself managing more applications and data than I do at work, so I thought that I should be able to offer the same level of expertise to my clients. That way, I can help my clients with the everyday maintenance of their IT network systems. I wanted to take the CDP exam to upgrade my knowledge to that of a CDP. It is

beneficial in that it can improve your career, providing you with a competitive edge over your peers. You can use your certification to showcase the level of expertise you possess. Once certified, you will be able to offer and provide proof that you are proficient in this field. The certification is valid for three years and is available in various locations. I recommend the exam because it is informative and straightforward. It is really a great exam that provides a foundation for a career in information technology. I think the result of the exam can be applied towards your career advancement and it is a great addition to your portfolio. I feel that the exam can be beneficial to any IT professional. It takes only two and half hours to complete.

Certification Preparation Tips The certified data center professional exam covers a lot of topics, so you should prepare yourself for the test and review what you have learned. For the exam, you will need to know about the TCP/IP networking protocol and its sub-protocols. It will also be important to know about standard technologies that are used in data centers such as the following: Cisco Systems Dell HP IBM AIX Lotus Notes Microsoft Windows 2000 Microsoft Windows XP Microsoft Windows Vista This exam will cover a lot of technological aspects 82157476af
